TOOTH – COLORED FILLINGS

We have restored one or more of your teeth with tooth-colored materials. The resin (plastic) material used contains small “filler” particles of glass-like material for strength and wear resistance. These restorations will serve you well for several years. They contain the finest and most up-to-date materials available today. Please be aware of the following information about your new restorations.

CHEWING: Avoid chewing excessively hard foods such as hard candy, corn nuts, ice, bones, etc... because the resin material can be broken from the tooth with extreme force. If breakage does occur, replacement of the restoration is not difficult.

Recall Visits: Professional six-month examinations are necessary. Developing problems can be detected at an early stage and repaired easily. Waiting for a longer time may require redoing the entire restoration. We will contact you when it is time for your recall appointment.

Preventive Procedures: To provide optimum longevity for your restorations and to prevent future decay and supporting tissue breakdown, please brush and floss after meals and before bedtime. We do recommend you use a fluoride containing mouthrinse daily. The best time is immediately before bedtime.
